WOULD YOU LIKE TO SAVE MONEY THIS SUMMER?

Dear Rainier View Water Customer:

With spring and summer just around the corner, this notice is to serve as a reminder that *it is extremely important that you plan your household summer conservation program now*. This program should include leak detection and repair, such as a Home Water Conservation Kit (*one per household, available at our office*). If you have an automatic sprinkler system, rain sensors would be a good investment. These are just two examples to help you conserve water. The back of your statement can also provide valuable usage and billing information so that you can monitor your usage.

Many people mistakenly believe that water conservation is related to drought. In reality, the purpose of conservation (with or without drought) is to implement effective use of water. The overuse of water that typically occurs between the months of April-September for outside use is discouraged.

A watering calendar will be included in your May statement to assist you. For those customers who would like additional water use efficiency information, please visit the web sites listed below or contact us at 253-537-6634.
